STA1 This strain has been genetically typed in our lab using polymerase chain reaction (PCR). Through this genetic testing, we have determined this strain to contain the *STA1* gene (glucoamylase), a potential indicator of *Saccharomyces cerevisiae* var. *diastaticus*. Brewers yeast are natural hybrids, which make it possible for certain strains to display elements of the *STA1* gene. These strains have the ability to utilize some dextrins (unfermentable sugars), resulting in higher levels of attenuation than what is considered typical.
